Use of AI in Law: Today, UPES, a multidisciplinary university, has signed an agreement with The University of Law (ULaw), a very old and renowned law university in the UK. Under this agreement, a special center will be created in UPES, which will be called 'Centre of Excellence' (CoE). This collaboration is a big step towards expanding educational opportunities and advancing research work.

Research will be an important part of this collaboration, especially in the field of Artificial Intelligence (AI) and ethics. The center will also run training courses, small centers and a start-up incubator to promote new ideas and business startups among students and teachers. Apart from this, teachers from both universities will visit each other's places to teach, which will lead to a good exchange of knowledge and teaching methods.

This collaboration will also start overseas study programs for students. It will have a syllabus that will give students the experience of studying at an international level. There will also be a set process of testing and certificates, which will further increase the value of this program. It will be taught by expert teachers from both ULaw and UPES.

Speaking on the collaboration, Professor Peter Crisp, Deputy Vice-Chancellor of ULaw, said, “We are delighted to partner with UPES to bring ULaw's 148-year-old legacy of legal education to India. This partnership reflects our shared vision of producing career-ready law professionals who can succeed in today's fast-changing and technologically advanced world. Together, we want to innovate legal education, especially in new areas such as AI, and set new standards in training and research.”

Dr Abhishek Sinha, Dean, UPES School of Law and Head, Department of International Affairs, said, “Partnering with a renowned international university like ULaw is in sync with our vision of building the ‘university of tomorrow’. The establishment of this centre will enhance the level of education and meet the need for professionals who are prepared to tackle new challenges such as ethics of AI. Together, we are bridging the gap between education and real-world needs.”

ULaw's practical teaching approach and UPES' innovative thinking will combine to create opportunities for students to learn market-relevant skills. This partnership further strengthens their efforts to meet the changing needs of education and research and prepare students for the challenges of the future.

Tailor's son sold newspapers to pay for his studies, became DM sahab on the basis of his hard work

The University of Law (ULaw) is one of the oldest and most respected institutions in the UK to teach law. Along with law, ULaw also offers a number of professional courses such as business, policing, criminology, psychology, computer science and education.
